Sticky Tree Barrier – 5 Metres

Preventive protection

Fruit trees suffer immensely from pests such as winter moths or greenflies. To enjoy fresh fruit during the summer, we recommend protecting your trees as early as autumn. In fall, the wingless winter moth females crawl up the trunks of trees to lay their eggs into the crown. Her hungry offspring will do great damage there when it hatches in spring. The Gardigo Sticky Tree barrier is a glue ring that can prevent the insects from reaching the top of the tree. They will get stuck on their way up.

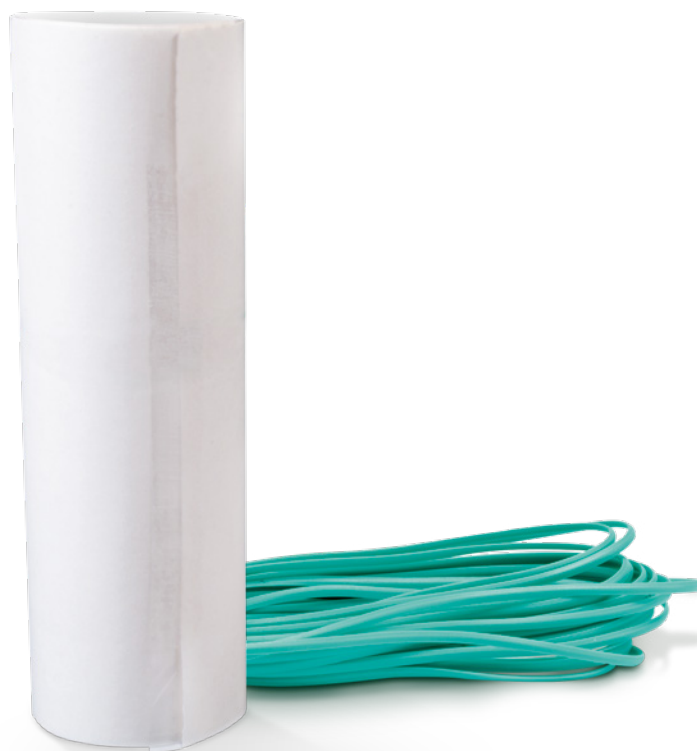

Tree glue bands can also be used during the warm time of year. This is when ants foster aphids in the tree tops and protect them from natural predators. It is best to prevent them from reaching the crowns.

The Gardigo Sticky Tree Barrier is transparent. Not only does this allow for a discreet installation as the band is hardly noticeable in the garden. Unlike white glue rings it does not attract beneficial insects with a bright colour. The Sticky Tree Barrier does not contain any insecticide.

Additional information

- **Dimensions:** 500 x 15 cm (W x H)
- **Packaging dimensions:** 5.2 x 15.5 x 4.7 cm (W x H x D)
- **Product description:** DE, GB, FR, ES, IT, NL, PT
- **Product images, scenery images**
- **Packaging unit:** 48 units per package

Specifications

- **Fastening string included**
